PAYMENT SOLUTIONS

● INTEGRATED PAYMENT INFRASTRUCTURE FOR LAOS

Building the Next **Payment Infrastructure** for Laos

KSLAO provides VAN-based payment switching, merchant management, settlement support, and transaction data services that connect banks, financial institutions, PG companies, merchants, and digital platforms.

A Payment Network Built for Laos

KSLAO is a payment infrastructure company preparing VAN-based services designed for the specific needs of the Lao financial ecosystem.

KSLAO is being built to serve as connective payment infrastructure for Laos — a Value-Added Network (VAN) that sits between the many participants of the payment flow and lets them transact through a single, standardized integration. Rather than requiring every bank, payment gateway, merchant, and platform to build and maintain point-to-point connections, KSLAO aims to provide one reliable layer that routes, manages, and settles transactions across the ecosystem.

Our focus is on the fundamentals that make a payment network trustworthy: standardized switching, dependable settlement support, clear merchant management, and transparent transaction data. We are working closely with prospective partners to design services that fit local regulations, banking practices, and the realities of a fast-growing digital economy.

Connected ecosystem players

24/7

Transaction monitoring

One connection. The whole ecosystem. A single integration with KSLAO is designed to link every participant in the payment flow — reducing the cost and complexity of going to market in Laos.

Our Mission

To simplify and strengthen digital payments in Laos by providing shared, standardized infrastructure that any qualified participant can connect to.

Our Approach

Conservative, partnership-led, and compliance-minded — we build carefully with banks, institutions, and platforms rather than around them.

Core Payment Solutions

A connected set of services covering the essential functions of modern payment infrastructure.

VAN Payment Switching

Routing and switching that connects issuers, acquirers, and networks through a single standardized interface.

Merchant Management

Onboarding, configuration, and lifecycle management for merchants across the network.

Settlement Support

Reconciliation and settlement processes designed to give partners clarity and confidence in every cycle.

Transaction Data Services

Structured transaction data and reporting to support operations, compliance, and business insight.

QR & Digital Payments

Support for QR-based and digital payment methods aligned with how people increasingly pay in Laos.

Security & Monitoring

Continuous transaction monitoring and security practices built into the core of the network.

Why Laos Needs Integrated Infrastructure

A growing digital economy is held back when every participant has to build its own connections.

Fragmented Connections

Banks, gateways, and platforms often integrate one-to-one, multiplying cost and technical complexity.

Barriers to Entry

New merchants and platforms face slow, expensive paths to accepting payments.

Limited Standardization

Inconsistent processes make settlement, reporting, and compliance harder for everyone.

Room to Grow

Rising digital and QR adoption creates strong demand for shared, reliable rails.

One Connection, the Whole Ecosystem

By acting as a central hub, KSLAO is designed to let each participant integrate once and reach the entire connected ecosystem — lowering the cost and complexity of launching and scaling payment services in Laos.

Who We Work With

KSLAO is being built in partnership with the core participants of the payment value chain.

Banks

Issuing and acquiring banks seeking standardized, reliable connectivity.

Financial Institutions

Institutions extending digital payment and settlement capabilities.

PG Companies

Payment gateway providers routing transactions across the ecosystem.

Merchants & Platforms

Businesses and digital platforms that need dependable payment acceptance.

Joint Venture Approach

KSLAO is pursuing a partnership and joint-venture model to combine local market knowledge with proven payment technology and operating experience. Working with established players — including Boomco as a prospective partner — allows us to build infrastructure that is both locally grounded and technically sound.

- Local expertise combined with proven payment technology and operations.
- Shared investment and shared responsibility for building trusted infrastructure.
- Compliance-first design aligned with Lao regulations and banking practices.
- Long-term commitment to the growth of the Lao digital payment ecosystem.

Partnership principles. We prioritize transparency, reliability, and standardization so that every participant can build on KSLAO with confidence.

Let's Build Payment Infrastructure Together

We welcome conversations with banks, financial institutions, PG companies, merchants, and platforms exploring the payment ecosystem in Laos.
